

«HYGIENIC TYPE»

The basic characteristic of the conveyor belts and escalators series **ALPHAbelt 2825** is that they were designed to **have minimum points of remnants retaining**, so as their cleaning to be made properly, easy and fast in both their surfaces (top and bottom).

They are **straight runnings nets** and are made by assembling various forms of plastic segments, with **pitch 25 mm**.

By this way we can make belts and escalators with **width from 50 to 3.000 mm**, and unlimited length.

They are designed to convey **small and medium loads**.

They are produced of **materials suitable for contact with food**.

They function in environment with temperature **from -50 up to +95°C**, depending on the material they are produced of.

The motion transmission is made by the **plastic sprockets 2825**.
